

WP AUTO BLOGGER

WP Auto Blogger Documentation

WP Auto Blogger Plugin Documentation: API Config Tab

Welcome to the **API Config** tab documentation for WP Auto Blogger. Below, you'll find a breakdown of each field, what it does, and how to configure it for the best results. This tab is essential for integrating the OpenAI API, which powers the content generation features of WP Auto Blogger.

The screenshot displays the WP Auto Blogger plugin's API configuration interface. The 'API Config' tab is active, showing the following settings:

- OpenAI API Key:** A text input field containing a long alphanumeric string. Below it is a 'Test API Key' button and a note: 'Enter your OpenAI API key here. You can get your API key from [here](#).'
- Model:** A dropdown menu set to 'gpt 4 turbo'. Below it is the instruction: 'Select the model to use for content generation.'
- Max Tokens:** A numeric input field set to '1000'. Below it is the instruction: 'Limit the maximum number of tokens for each request. leave it empty for unlimited.'
- Temperature:** A numeric input field set to '1'. Below it is the instruction: 'Adjust the randomness of the generated content. Higher values create more random results.'
- Frequency Penalty:** A numeric input field set to '0'. Below it is the instruction: 'Controls how much to penalize new tokens based on their existing frequency.'
- Presence Penalty:** A numeric input field set to '0'. Below it is the instruction: 'Adjusts the model to encourage or discourage talking about new topics.'

A 'Save Settings' button is located at the bottom right of the settings area.

1. OpenAI API Key

What it is: This is the unique API key provided by OpenAI that allows WP Auto Blogger to access and interact with the OpenAI GPT model.

What it does: The API key connects your WordPress site to OpenAI's servers, enabling the generation of AI-powered content based on the prompts you provide.

How to use it:

Visit OpenAI and sign up or log in.

Go to the API section and create a new API key.

Copy the key and paste it into this field.

Important: Ensure your OpenAI account has sufficient funds or billing enabled to cover API usage.

2. Model

What it is: The AI model you select will determine the type and complexity of the generated content.

What it does: This field allows you to choose which OpenAI model WP Auto Blogger will use to generate posts. Different models vary in size, speed, and capability.

How to use it:

Choose between available models like GPT-3.5 or GPT-4 Turbo depending on your needs.

For most use cases, GPT-4 Turbo provides more advanced and detailed results, making it a great choice for generating high-quality blog content.

Make sure the model you select matches your usage plan and API key permissions.

3. Max Tokens

What it is: Tokens represent pieces of words or characters. Max Tokens limit how much text the model generates.

What it does: This field determines the maximum length of the generated content. A higher number of tokens means longer posts, while a lower number generates shorter text.

How to use it:

Set this field based on the desired length of your blog posts. For example, 300-500 tokens would generate a medium-length post.

Keep in mind that longer outputs use more API resources, so balance content length with your OpenAI budget.

Recommendation: Start with 500 tokens for medium-length blog posts and adjust based on your content needs.

4. Temperature

What it is: Temperature controls the randomness and creativity of the AI's responses. It adjusts how "creative" or "predictable" the generated content is.

What it does: Higher values (up to 1) make the output more creative and diverse, while lower values (closer to 0) make the content more focused and deterministic.

How to use it:

High Creativity (0.7 - 1.0): Set a higher temperature if you want the content to be more imaginative, great for creative writing or varied blog topics.

Focused Content (0 - 0.3): Use a lower temperature for more factual, straightforward content where creativity is less important.

Recommendation: Start with a temperature around 0.7 for a balanced mix of creativity and coherence.

5. Frequency Penalty

What it is: Frequency Penalty reduces the likelihood of the model repeating the same lines or phrases within the content.

What it does: This setting discourages the model from using repetitive words or phrases, helping to ensure the content is varied and unique.

How to use it:

A higher frequency penalty (up to 2) results in less repetition, ideal for generating diverse and engaging posts.

A lower frequency penalty (closer to 0) allows more repetition, which can be useful for structured content like product descriptions or FAQs.

Recommendation: Set it between 0.5 and 1.0 to keep content fresh without over-restricting the model.

6. Presence Penalty

What it is: Presence Penalty influences the likelihood of the AI introducing new topics or ideas into the content.

What it does: A higher presence penalty encourages the model to explore new content and topics, while a lower value keeps the text focused on existing themes.

How to use it:

A higher presence penalty (up to 2) will introduce more varied topics and concepts, great for exploratory or creative writing.

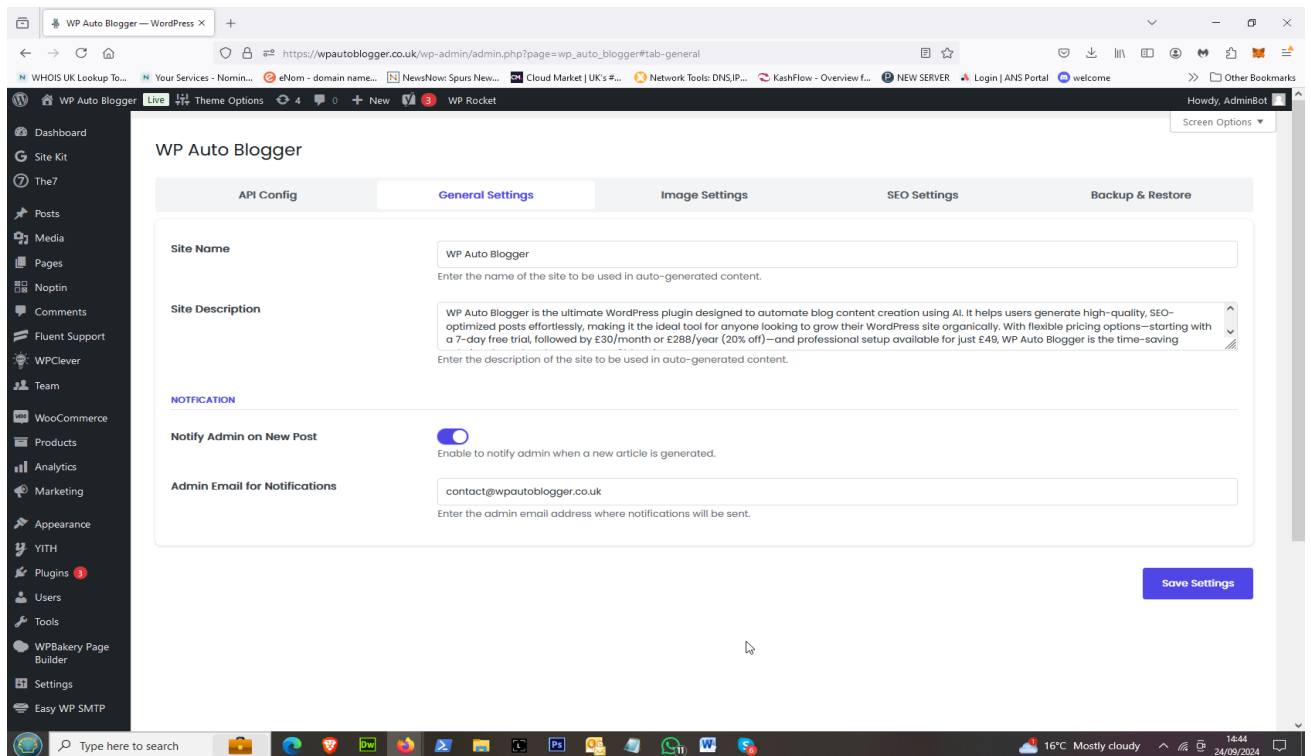

A lower presence penalty (closer to 0) will make the model stick to the original topic more strictly, perfect for informative or topic-specific posts.

Recommendation: Set this around 0.5 for most blog posts to encourage a balanced exploration of topics without going off-track.

The API Config tab is critical for fine-tuning how WP Auto Blogger generates your content. By adjusting these settings, you can control the length, creativity, and focus of your AI-generated posts. Be sure to experiment with different configurations to find what works best for your specific blogging needs.

WP Auto Blogger Plugin Documentation: General Settings Tab

The General Settings tab allows you to configure key details about your site and control how WP Auto Blogger interacts with you through email notifications. These settings help tailor the plugin's content generation to match your website's identity and ensure you're kept up-to-date on important actions.

1. Site Name

What it is: The name of your website, as it will appear in AI-generated content and email notifications.

What it does: The site name helps the plugin generate content that aligns with your brand by incorporating your site's identity into the posts.

How to use it:

Enter the full name of your website or blog (e.g., "WP Auto Blogger").

This field is essential for ensuring the AI references your site appropriately within the content it creates.

Tip: Keep the name consistent with your branding across your site and marketing materials.

2. Site Description

What it is: A brief summary of what your website or business is about.

What it does: This description gives the AI context for generating relevant content tailored to your niche or industry.

How to use it:

Enter a concise description of your site, focusing on your core services, products, or blog topics (e.g., "We specialize in WordPress plugins and automated content creation").

The site description will guide the AI in creating content that aligns with your website's theme and goals.

Recommendation: Make sure the description is clear and specific, as this will help the AI understand the purpose and audience of your site.

3. Email Notifications

What it is: This setting controls whether or not you receive email notifications from WP Auto Blogger about important events, such as post generation or errors.

What it does: Email notifications keep you informed when the plugin generates new blog posts, runs into issues, or requires your attention.

How to use it:

Enable notifications: If you want to receive an email every time a post is generated or if the plugin encounters an error, make sure this option is selected.

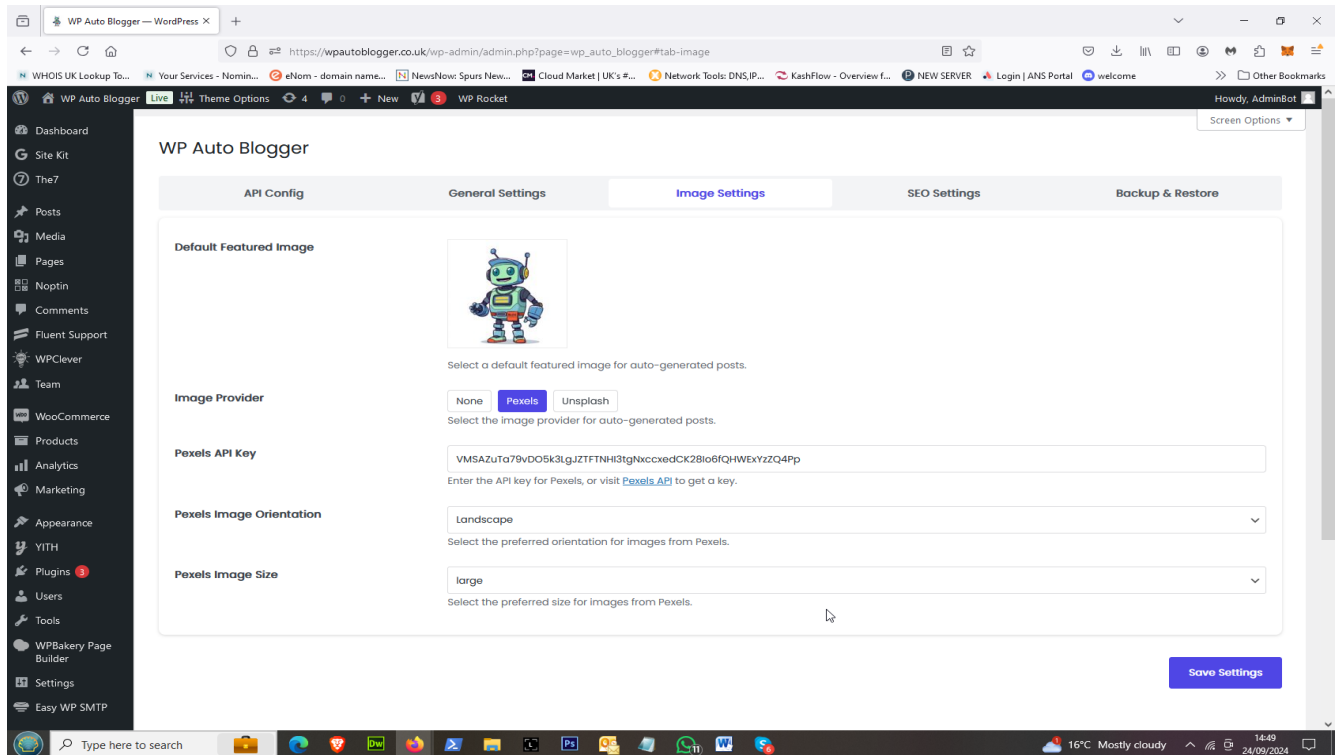

Disable notifications: If you prefer to check post drafts manually without receiving email updates, you can leave this option unselected.

Tip: We recommend enabling email notifications so you're always in the loop, especially when new drafts are created and ready for review.

The General Settings tab is where you personalize the plugin to align with your website's identity. By configuring the Site Name and Site Description, WP Auto Blogger can generate content that feels more authentic and relevant to your brand. The Email Notifications feature ensures you stay informed about all content generation activities.

WP Auto Blogger Plugin Documentation: Image Settings Tab

The Image Settings tab allows you to configure how images are handled within your AI-generated blog posts. You can choose a default featured image, integrate with popular image providers like Pexels and Unsplash, and customize the appearance of images based on orientation and size. Here's a detailed explanation of each field in this tab and how to configure them for optimal results.

1. Default Featured Image

What it is: This is the image that will be used as the featured image for blog posts when no specific image is provided or generated.

What it does: If the AI-generated post doesn't have an image, WP Auto Blogger will automatically assign this default featured image to ensure your posts remain visually appealing.

How to use it:

Upload a high-quality image that represents your brand or blog.

This image will appear on all posts without specific imagery, maintaining a consistent look for your blog.

Tip: Choose an image that is generic enough to suit various blog topics but still aligns with your brand's style.

2. Image Provider

What it is: This option allows you to choose from different image providers, such as Pexels and Unsplash, to automatically pull high-quality images into your blog posts.

What it does: When an image provider is selected, WP Auto Blogger will fetch relevant images to match the content of each generated post.

How to use it:

None: No images will be fetched, and only the default featured image will be used if specified.

Pexels: Select this option to pull free images from the Pexels image database.

Unsplash: Select this option to pull free images from the Unsplash image database.

Recommendation: Choose either Pexels or Unsplash to automatically integrate beautiful, high-resolution images that enhance your blog content.

3. Provide API Key

What it is: This field is required when using image providers like Pexels or Unsplash. It enables the plugin to fetch images from their respective APIs.

What it does: The API key gives WP Auto Blogger access to the image databases of Pexels or Unsplash, allowing the plugin to download relevant images for each post.

How to use it:

Visit Pexels API or Unsplash API to create an account and generate an API key. Both These Services are FREE.

Copy the API key provided by the service and paste it into this field.

Important: Without a valid API key, WP Auto Blogger cannot fetch images from these providers.

4. Image Orientation

What it is: This setting allows you to specify the orientation of the images pulled from the selected provider (e.g., landscape, portrait, or square).

What it does: It controls the shape and layout of the images that are used in your blog posts.

How to use it:

Landscape: Choose this option if you prefer wider images, ideal for blog posts and featured images.

Portrait: Choose this option if you need taller images, often suitable for more visual storytelling formats.

Tip: Use landscape for general blog posts, as they tend to look better on most WordPress themes.

5. Image Size

What it is: This field allows you to control the resolution of the images fetched from the image provider.

What it does: The size setting defines how large the images will be in terms of resolution, impacting the loading speed and overall appearance of your posts.

How to use it:

Small: Select this if you prefer faster loading times, especially for mobile users.

Medium: Provides a good balance between quality and performance.

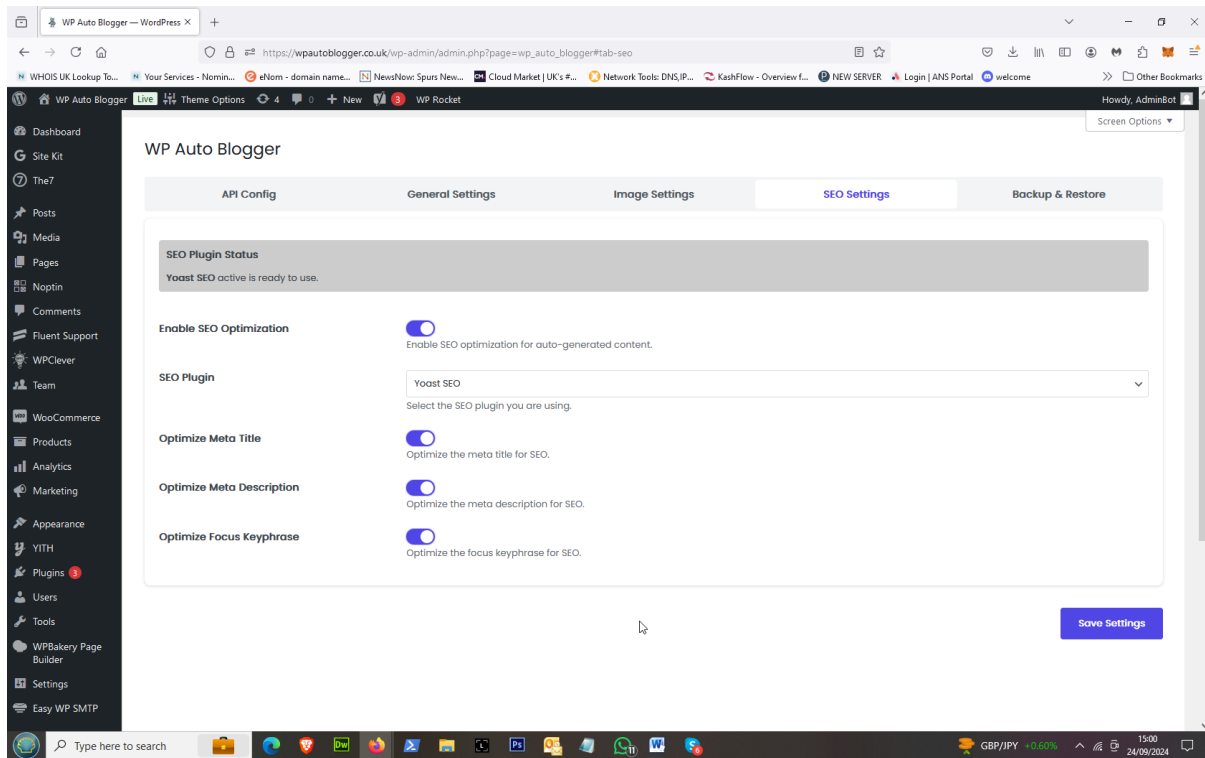

Full: Choose this for high-resolution images that will appear crisp but may require more loading time.

Recommendation: Medium is a good starting point for most blogs, offering a balance between quality and speed.

The Image Settings tab is designed to help you manage how images are used in your blog posts. By selecting an image provider like Pexels or Unsplash and configuring image orientation and size, you can ensure that your posts are visually engaging while also maintaining site performance. The Default Featured Image option provides a fall back, ensuring every post looks polished even when no specific images are available.

WP Auto Blogger Plugin Documentation: SEO Settings Tab

The SEO Settings tab allows you to integrate WP Auto Blogger with popular SEO plugins and optimize key SEO elements of your blog posts automatically. This section helps ensure that every post generated by the plugin is not only high-quality but also optimized for search engines, helping boost your site's rankings and visibility.

1. Enable SEO Optimization (On/Off Toggle)

What it is: This toggle enables or disables WP Auto Blogger's SEO optimization features.

What it does: When switched on, WP Auto Blogger will automatically optimize key SEO components of the generated posts, such as the meta title, meta description, and focus key phrase.

How to use it:

Turn this option on to allow WP Auto Blogger to apply SEO optimizations based on your selected SEO plugin (Yoast or RankMath).

Turn it off if you prefer to handle SEO manually.

Recommendation: Keep this enabled if you want WP Auto Blogger to enhance your posts' SEO automatically.

2. SEO Plugin

What it is: This dropdown allows you to select which SEO plugin WP Auto Blogger will integrate with—either Yoast or Rank Math.

What it does: Once integrated, WP Auto Blogger will apply SEO optimizations directly into the fields provided by your selected SEO plugin (meta title, description, focus keyphrase, etc.).

How to use it:

Choose either Yoast or Rank Math based on the SEO plugin you're using for your WordPress site.

Yoast SEO: A popular SEO plugin that helps optimize your website's content for search engines.

Rank Math: Another leading SEO plugin, offering advanced SEO controls and settings.

Important: Ensure that the selected SEO plugin is already installed and activated on your WordPress site for seamless integration.

3. Optimize Meta Title (On/Off Toggle)

What it is: This toggle controls whether WP Auto Blogger automatically generates and optimizes the meta title for each blog post.

What it does: When enabled, WP Auto Blogger will craft a meta title that is relevant, compelling, and optimized for SEO based on the content of the post.

How to use it:

Switch this on if you want the plugin to automatically generate an SEO-friendly meta title for every post.

Switch it off if you prefer to manually write your meta titles.

Recommendation: Enable this option to ensure that every post has an optimized meta title, which is a critical factor for search engine rankings.

4. Optimize Meta Description (On/Off Toggle)

What it is: This toggle controls whether WP Auto Blogger automatically generates and optimizes the meta description for each blog post.

What it does: When enabled, the plugin will create a concise and engaging meta description that summarizes the post and includes relevant keywords to boost SEO.

How to use it:

Switch this on if you want the plugin to automatically generate an SEO-optimized meta description for every post.

Switch it off if you prefer to manually write your meta descriptions.

Recommendation: Enable this option to ensure your posts have well-crafted meta descriptions, improving click-through rates and search engine visibility.

5. Optimize Focus Key phrase (On/Off Toggle)

What it is: This toggle controls whether WP Auto Blogger automatically selects and optimizes the focus key phrase for each blog post.

What it does: When enabled, the plugin will determine a focus key phrase based on the content and automatically assign it in the SEO plugin (Yoast or RankMath).

How to use it:

Switch this on if you want WP Auto Blogger to automatically choose a relevant focus key phrase for each post.

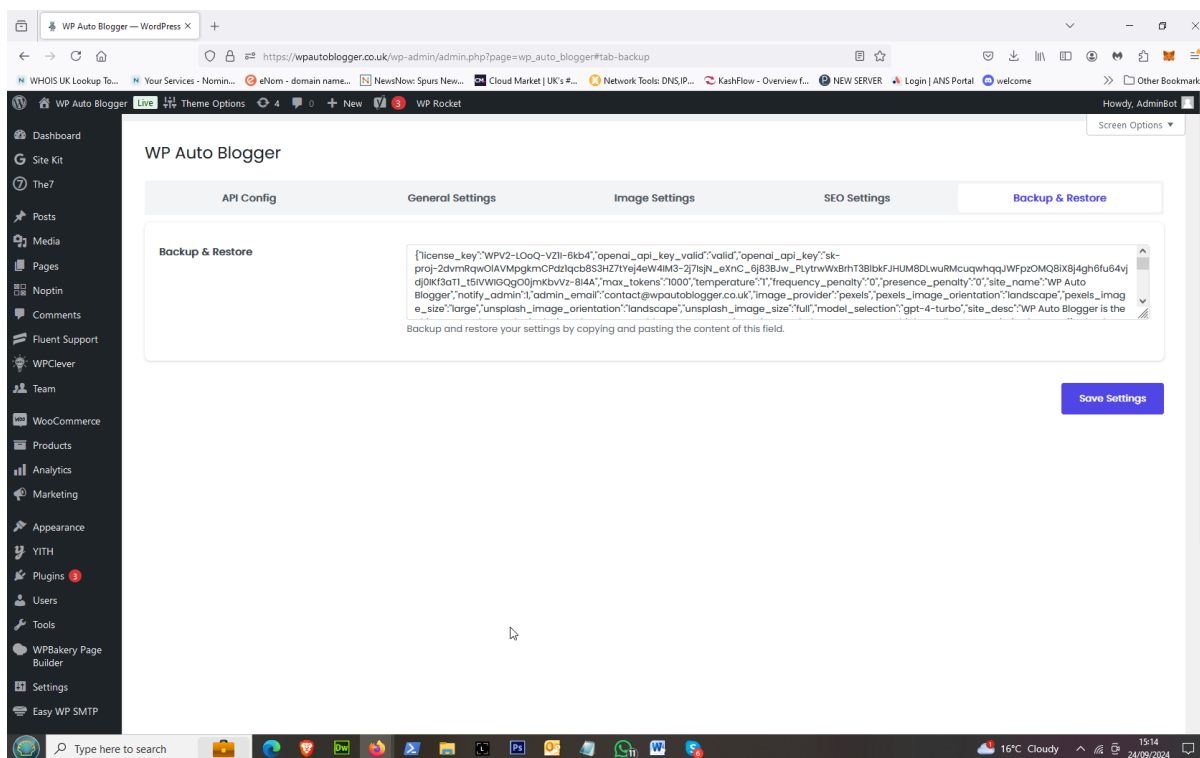

Switch it off if you want to manually input the key phrases for your blog posts.

Recommendation: Enable this option to ensure that each post targets a specific key phrase, crucial for improving your post's SEO performance.

The SEO Settings tab is essential for ensuring that your AI-generated posts are fully optimized for search engines. By enabling these features and selecting your preferred SEO plugin, WP Auto Blogger will handle critical SEO tasks for you, making sure each post is optimized with a well-structured meta title, description, and key phrase.

WP Auto Blogger Plugin Documentation: Backup/Restore Tab

The Backup/Restore tab provides an easy way to safeguard your WP Auto Blogger settings or transfer them to another site. By copying and pasting the settings from this tab, you can back up your current configuration or restore a previous one without manually adjusting each setting.

1. Backup Settings

What it is: This field contains all of your current WP Auto Blogger settings in a format that can be copied and saved for future use.

What it does: By copying the content in this field, you create a backup of all your settings. This is useful if you want to save your current setup or migrate it to another website.

How to use it:

Step 1: Click inside the field where the backup settings are displayed.

Step 2: Select all the content (Ctrl + A or Command + A) and then copy it (Ctrl + C or Command + C).

Step 3: Paste the copied settings into a text file and save it somewhere secure.

Tip: This is especially useful if you're planning major changes to your site or moving to a new WordPress installation.

2. Restore Settings

What it is: This field allows you to restore settings by pasting in a previously copied backup from the Backup Settings field.

What it does: When you paste your previously saved settings here, it will restore your WP Auto Blogger configuration to match that backup. This is useful for quickly reverting to a saved configuration or setting up WP Auto Blogger on a new site.

How to use it:

Step 1: Locate the text file where you saved your backup settings.

Step 2: Copy the contents of that file (Ctrl + C or Command + C).

Step 3: Paste the copied settings into the Restore Settings field (Ctrl + V or Command + V).

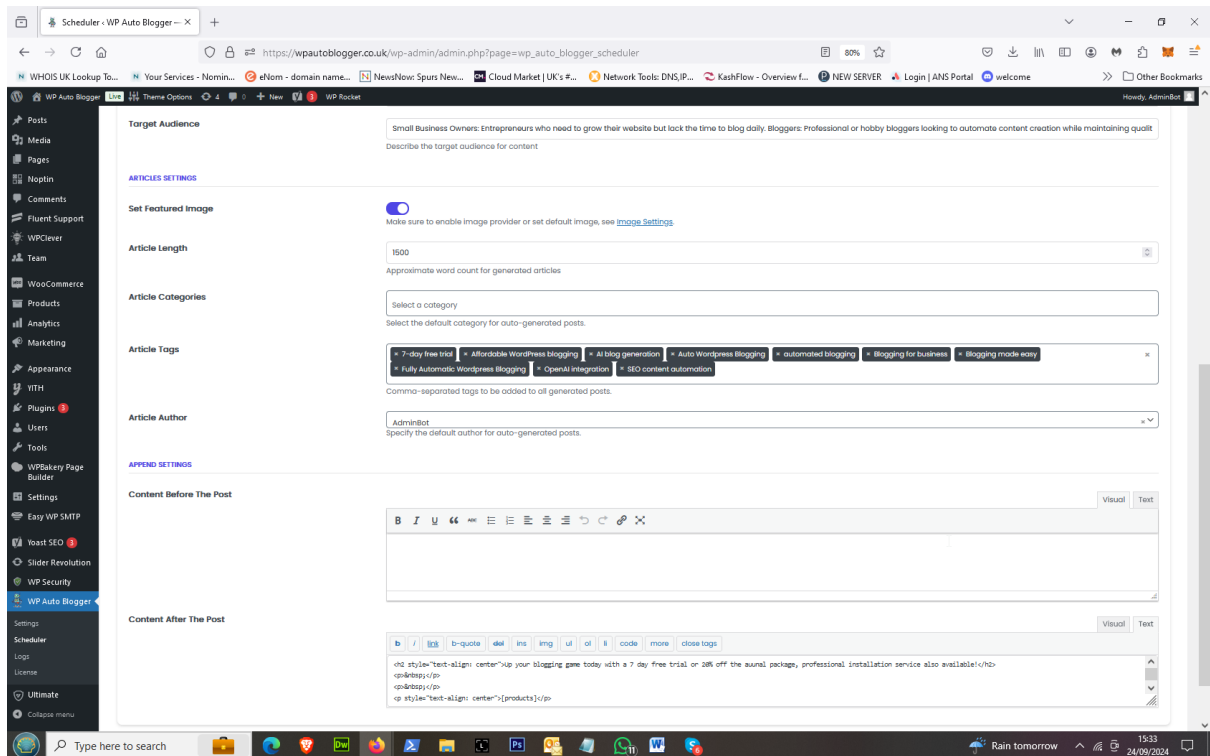

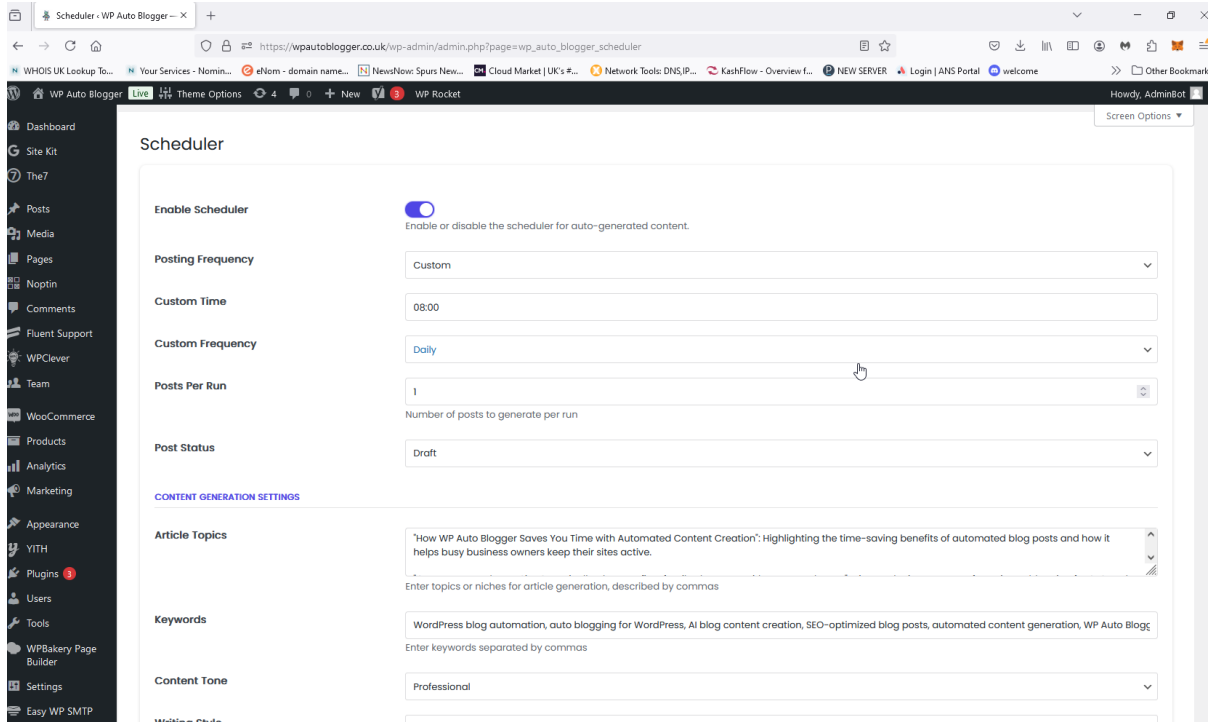

Step 4: Click the "Restore" button (or equivalent action) to apply the backup and restore your settings.

Important: Make sure the settings you're restoring are up-to-date and compatible with your current WordPress version to avoid conflicts.

The Backup/Restore tab is your safety net for WP Auto Blogger settings. It allows you to back up your entire configuration or transfer it to another WordPress site effortlessly. This feature ensures you can always return to a stable setup if changes are made or if you're migrating your site.

WP Auto Blogger Plugin Documentation: Scheduler Page

The Scheduler page is where you configure how often WP Auto Blogger generates and publishes blog posts, as well as how the content is structured. This tab offers a wide range of customizable options, ensuring that your content creation schedule aligns with your business needs and content strategy.

1. Turn Scheduler On/Off (On/Off Toggle)

What it is: A switch that enables or disables the automated content generation schedule.

What it does: When the scheduler is turned on, WP Auto Blogger will automatically generate and publish posts based on the settings you configure. If switched off, no automatic posts will be created.

How to use it:

Turn this on to enable automatic posting according to your frequency settings.

Turn it off if you want to manually generate and publish content.

2. Posting Frequency

What it is: This field controls how often WP Auto Blogger generates and publishes posts. Options include custom, hourly, daily, weekly, and monthly.

What it does: The frequency setting determines the interval at which new posts are generated.

How to use it:

Select hourly, daily, weekly, or monthly to automatically generate posts at those intervals.

Choose custom if you want more control over when and how often posts are created.

Recommendation: Start with a daily or weekly schedule to keep your content fresh while maintaining quality.

3. Custom Time

What it is: If custom frequency is selected, this field allows you to specify the exact time of day you want posts to be generated and published.

What it does: This option gives you the flexibility to decide the precise time when new content is created.

How to use it:

Enter the preferred time (e.g., 09:00 AM) for content generation.

Ensure that the time selected aligns with your audience's peak engagement times for better visibility.

4. Custom Frequency

What it is: If custom is selected, this field lets you choose how often posts are generated—daily, weekly, or monthly.

What it does: It allows you to fine-tune the scheduling based on your content strategy.

How to use it:

Select how frequently posts should be generated (daily, weekly, monthly).

Customize this based on your posting needs and business goals.

5. Days per Week

What it is: If custom frequency is set to weekly, this field allows you to choose the specific days of the week when posts should be generated.

What it does: This setting gives you control over which days your posts are published.

How to use it:

Select the days of the week that you want content to be generated (e.g., Monday, Wednesday, Friday).

Use this to optimize content release around peak traffic times.

6. Posts Per Run

What it is: This field controls the number of posts generated during each scheduled run. By default, it is set to 1.

What it does: It limits the number of posts created at once, helping to control content output.

How to use it:

Keep it set to 1 to maintain a steady flow of content.

Increase this number if you want to generate multiple posts in one run (use with caution to avoid overwhelming your audience).

7. Post Status

What it is: This field allows you to set the status of the generated posts—draft or live.

What it does: It controls whether the post is saved as a draft for review or published immediately.

How to use it:

Select draft if you want to review or edit the post before it goes live.

Select live if you prefer the post to be published automatically upon creation.

8. Article Topics

What it is: A field where you can specify topics that WP Auto Blogger should focus on when generating posts.

What it does: This guides the AI in generating relevant content based on the topics you specify.

How to use it:

Enter specific topics or themes (e.g., "WordPress Tips," "E-commerce Trends") to focus the generated content on your business niche.

9. Keywords

What it is: A field where you can add keywords to guide the content generation process.

What it does: Ensures that your posts are optimized for SEO by including relevant keywords.

How to use it:

Add target keywords that you want to rank for in search engines (e.g., "WordPress plugins," "online marketing tips").

These keywords will be incorporated into the content.

10. Content Tone

What it is: A setting that allows you to define the tone of the generated content (e.g., casual, formal, informative, friendly).

What it does: Adjusts the writing style and language to match your brand's voice.

How to use it:

Select the tone that best fits your brand and audience (e.g., informal for casual blogs or formal for business-related content).

11. Writing Style

What it is: A field that lets you choose the overall writing style (e.g., descriptive, persuasive, instructional).

What it does: Tailors the way the content is written based on the selected style.

How to use it:

Choose a style that fits the type of content you need (e.g., instructional for tutorials, persuasive for sales-driven posts).

12. Target Audience

What it is: A field that defines the audience the content should be aimed at.

What it does: Helps WP Auto Blogger tailor content to meet the needs and expectations of your specific audience.

How to use it:

Enter details about your target audience (e.g., "small business owners," "e-commerce retailers") to help the AI focus on generating relevant content.

13. Set Featured Image

What it is: A toggle that allows you to automatically set a featured image for each post.

What it does: Ensures that a featured image is added to every post for visual appeal.

How to use it:

Turn this option on to have WP Auto Blogger automatically assign a featured image based on your Image Settings.

14. Article Length

What it is: A field that determines the approximate word count of each generated post.

What it does: Controls the length of the content to fit your blog's requirements.

How to use it:

Set the desired word count (e.g., 500 words, 1000 words) based on your content needs and SEO strategy.

15. Article Categories

What it is: A field where you can assign categories to the generated posts.

What it does: Helps organize the content on your WordPress site by categorizing it appropriately.

How to use it:

Select or enter categories that fit your content strategy (e.g., "WordPress Tips," "E-commerce News").

16. Article Tags

What it is: A field for adding tags to the generated content for better categorization and search visibility.

What it does: Helps improve SEO and user navigation by tagging posts with relevant keywords.

How to use it:

Enter tags related to your post topics (e.g., "SEO," "WordPress plugins") to make content easier to find.

17. Article Author

What it is: A field to assign an author to the generated posts.

What it does: Allows you to designate who is listed as the author of the posts.

How to use it:

Choose the default author for the generated posts (e.g., yourself, a guest author, or a generic account).

18. Set Content Above Blog

What it is: A text field with TinyMCE options where you can add content to be displayed above the generated blog content.

What it does: This field allows you to insert static content that will appear at the top of every blog post.

How to use it:

Add a welcome message, call-to-action, or product promotion to appear before the generated blog content (e.g., "Check out our latest offers!").

19. Set Content Below Blog

What it is: A text field with TinyMCE options where you can add content that will be displayed below the generated blog content.

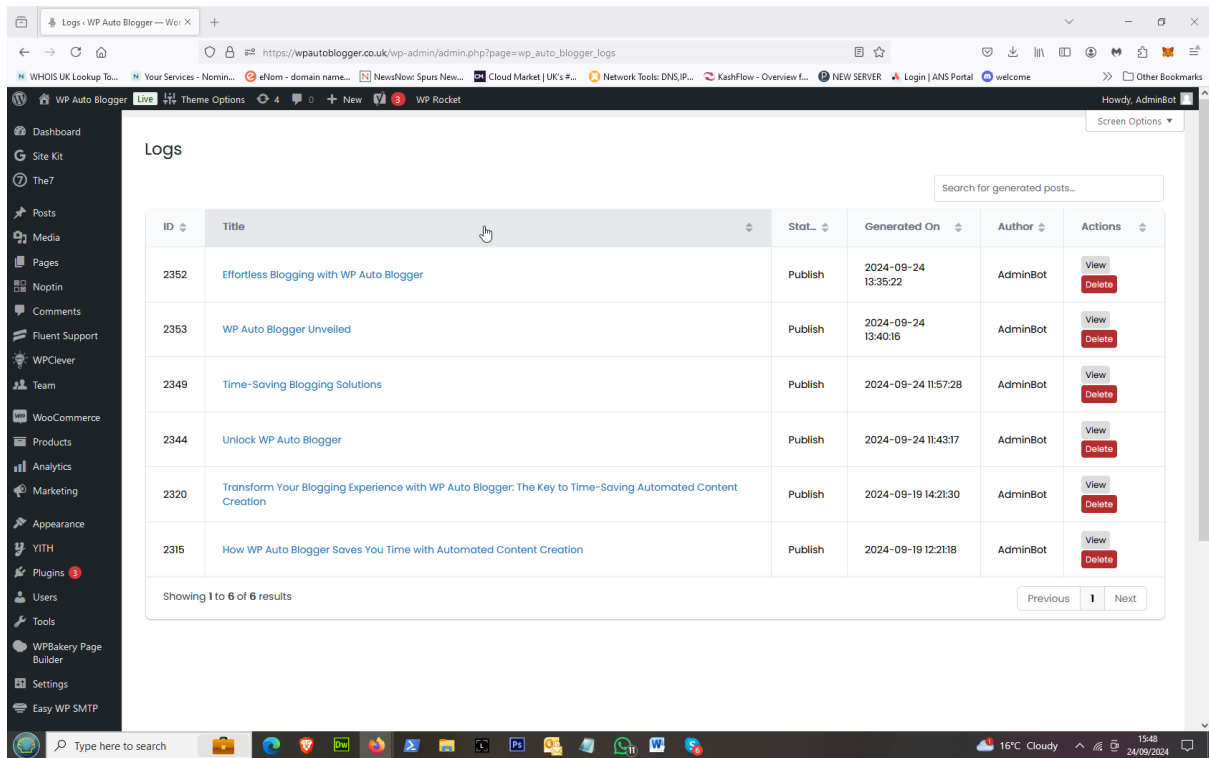

What it does: Allows you to add static content after the post, such as a footer, contact form, or call-to-action.

How to use it:

Insert a sign-off, contact form, or additional promotions that will appear below the generated content (e.g., "Contact us for more information" or "Shop our latest products").

WP Auto Blogger Plugin Documentation: Logs Page

The Logs page allows you to keep track of all the posts generated by WP Auto Blogger, including their status, the date they were created, the assigned author, and available actions. This page is essential for reviewing the content created, managing post statuses, and keeping your blog organized.

ID	Title	Status	Generated On	Author	Actions
2352	Effortless Blogging with WP Auto Blogger	Publish	2024-09-24 13:35:22	AdminBot	View Delete
2353	WP Auto Blogger Unveiled	Publish	2024-09-24 13:40:16	AdminBot	View Delete

2320	Transform Your Blogging Experience with WP Auto Blogger: The Key to Time-Saving Automated Content Creation	Publish	2024-09-19 14:21:30	AdminBot	View Delete
2315	How WP Auto Blogger Saves You Time with Automated Content Creation	Publish	2024-09-19 12:21:18	AdminBot	View Delete

1. Post Status

What it is: Displays the current status of each post generated by WP Auto Blogger.

What it does: This column shows whether the post is in draft mode or has been published as live.

How to use it:

Quickly review the post status to see if content is awaiting your approval (draft) or has already been published.

Tip: Check the draft posts regularly to review, edit, and approve them for publication.

2. Date Generated

What it is: Shows the exact date and time when the post was generated.

What it does: Helps you track when each post was created, allowing you to monitor the frequency and timing of generated content.

How to use it:

Use this column to verify that posts are being generated according to your scheduled settings (daily, weekly, etc.).

Ensure that content is consistently created as planned and adjust your settings if needed.

3. Author

What it is: Displays the name of the author assigned to each generated post.

What it does: Shows which user is attributed as the post's author, as set in the Scheduler settings or assigned manually.

How to use it:

Verify that the correct author is listed for each post.

If needed, you can update the author settings in the Scheduler tab or directly in the WordPress post editor.

4. Actions (View and Delete)

What it is: Provides quick action buttons for viewing or deleting generated posts.

What it does: These buttons allow you to review the content of each post or remove any unwanted posts from the list.

How to use it:

View: Click the View button to open and preview the post. This is useful for checking content quality, structure, and SEO settings before publishing or editing.

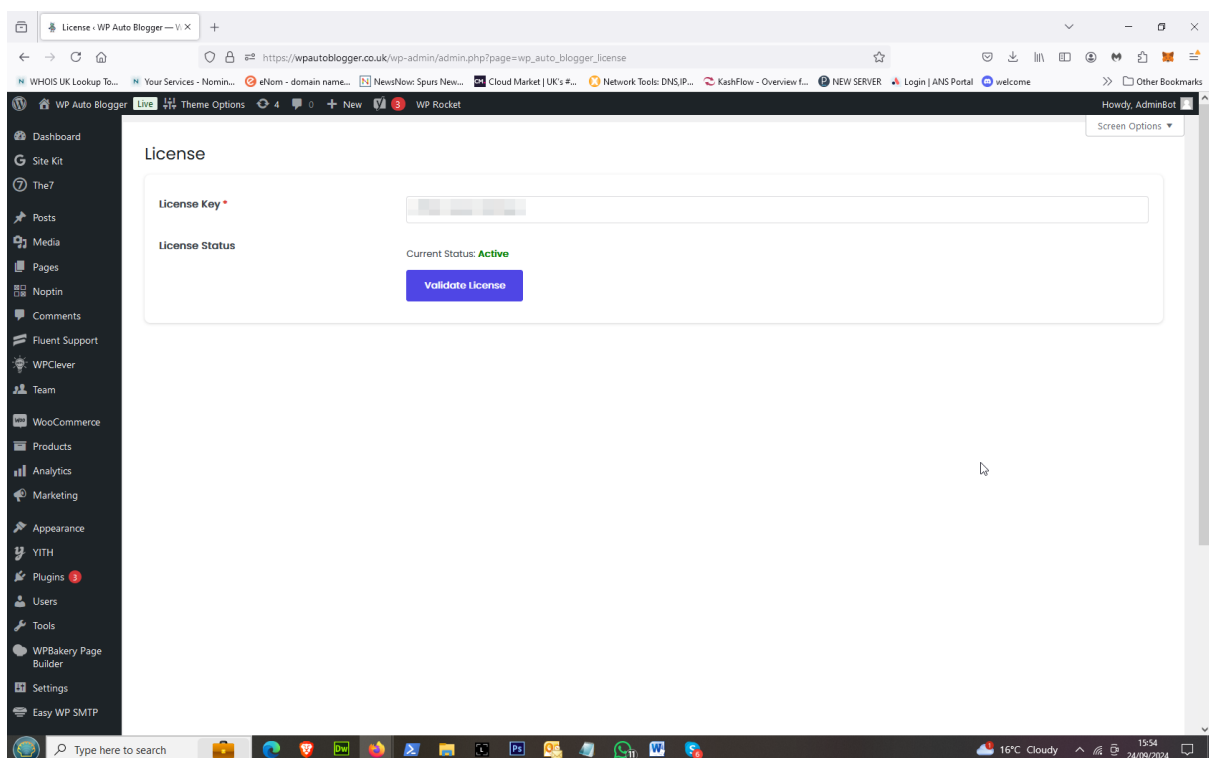

Delete: Click the Delete button to permanently remove a generated post. Use this action if the post doesn't meet your standards or if you don't wish to publish it.

Important: Once deleted, the post cannot be recovered, so be sure you want to remove it before clicking delete.

The Logs page is your central hub for managing all content generated by WP Auto Blogger. It provides an easy way to review post statuses, check when content was created, confirm the assigned author, and take quick actions such as viewing or deleting posts. Regularly checking the logs ensures you stay on top of your content generation process and maintain control over what gets published on your site.

WP Auto Blogger Plugin Documentation: License Page

The License page is where you manage your subscription by entering and activating your license key. This key is required to unlock and use all the features of WP Auto Blogger. Once activated, the license allows you to continue generating posts and using the plugin as part of your subscription plan.

1. License Key

What it is: The unique code you receive when you purchase your WP Auto Blogger subscription.

What it does: The license key verifies your subscription and unlocks the full functionality of WP Auto Blogger.

How to use it:

Retrieve your license key by logging into your WP Auto Blogger account:
<https://wpa Autoblogger.co.uk/my-account>.

Copy the license key from your account page.

Paste the key into the License Key field on the License page of the plugin.

2. Activate License

What it is: A button that activates your license key once entered.

What it does: Clicking this button validates the license key with the WP Auto Blogger system and confirms your subscription.

How to use it:

After entering your license key, click the Activate License button to enable the plugin's features.

If successful, the status below will change to Active.

3. Current Status (Active/Inactive)

What it is: This field shows whether your WP Auto Blogger subscription is currently active or inactive.

What it does: The status indicates whether your license key has been successfully activated or if the plugin is currently inactive due to an invalid or missing license key.

How to use it:

If your status shows Active, your license is valid and WP Auto Blogger is fully operational.

If the status shows Inactive, recheck your license key and try activating it again.

Tip: If your license becomes inactive after it was previously active, check your subscription status in the My Account section to ensure your subscription is still valid.

The License page is essential for managing your WP Auto Blogger subscription. Enter your license key to activate your plugin and gain full access to its powerful features. If your license key is not entered or activated, the plugin's functionality will be limited.

For any issues with your license or subscription, please contact our support team at contact@wpautoblogger.co.uk or visit <https://wpautoblogger.co.uk/support-portal/> and open a support ticket.

WP AUTO BLOGGER
